Strengthening IPR protection and advancing digital green government in Brazil.

Key results:

The SSC's efforts to support the development of a Brazilian economy based on knowledge-intensive industries will contribute to economic growth (SGD8.1), achieve higher levels of productivity (SGD8.2) and contribute to better frameworks for job creation and entrepreneurship that are not based on extractive industries of environmental degradation (SGD8.4). A strong IP infrastructure will further enhance scientific research, boost the technological capabilities in Brazil (SGD9.5) and contribute to industrial diversification (SGD9.b).

The expansion of digital government in Brazil will enhance transparency and limit irregularities in the provision of public services (SGD16.5) and contribute to institutional effectiveness and accountability at all levels of government (SGD16.6). Specific ongoing projects on digital identity in Brazil (SGD16.9) will also be directly supported in phase III. Using digital government and the data produced by it to enhance environmental sustainability will also help build capacity for addressing climate action and mitigation (SGD13.3).

The project will:

- Strengthen protection of interellectuel property in Brazil and advace digital and green innovation in government in Brazil.
- Advance innovation and IPR commercialization in Brazil and in the Latin American region and
- Advance digital government and green innovation in public services in Brazil.

Justification for support:

The proposed joint efforts build on the established strong bilateral SSC partnership between Brazil and Denmark that has been in existence since 2015.

Furthermore, the successful innovation cooperation between Denmark and Brazil from phase II will be continued to the benefit of exchanges between high-tech industries and researchers in both countries.

Major risks and challenges:

Stable political environment, mutual commitment and interest by all involved actors is a potential risk which will be continuoursly reviewed to facilitate a successfull implementation.

Justification for choice of partner:

National Institute for Industrial Property, INPI, is Brazil's central and key authority when it comes to Intellectual Property Rigths. This is the organisation that has the government mandate to drive industrial innovation through protection of Intellectual Property Rigths.

Summary:

This SSC proposal will pursue two main objectives, both of which were part of the previous two phases: i) strengthening protection of intellectual property rights and ii) advancing digital green government in Brazil. The proposed joint efforts build on the established strong bilateral SSC partnership between Brazil and Denmark that has been in existence since 2015.

The third SSC phase will adapt to the changing political priorities of Brazil and the remarkable organizational and strategic advancements made by the partnership institutions INPI and SGD during the two previous phases. It will also include activities with the "parent" ministries, the Ministry of Development, Industry, Commerce and Services (MDIC) as well as the Ministry of Management and Innovation in Public Services (MGI), as to reinforce selected strategic projects that have roots in the past two phases and will now be implemented at the highest level. The latter effort will also endeavor to establish a sustainable platform for dialogue between the two countries that can persist after the conclusion of the SSC.

Summary of background analysis and key strategic choices

(max 2 pages)

Brazil holds the fifth largest landmass, fifth largest population and has the twelfth largest economy in the world. It is an upper middle-income country and one of the global giants of mining, agriculture, and manufacturing. As a prospective member of OECD (Organisation for Economic Co-operation and Development), Brazil is actively seeking to boost its capacity for industrial innovation to drive further economic growth and attract investments. To harness this economic growth and diversify Brazil's economy with more knowledge-intensive sectors, stronger protection of intellectual property (IP) is seen by the federal government as a key priority.

Similarly, successive federal governments of Brazil have continued to work to expand the efficiency, transparency and reach of its public services to all citizens of the vast country to integrate them better in the rising prosperity and provide them with welfare, security, and economic opportunity. Since 2015, this ambition has been supported by the impressive growth of digital government services, accessible through mobile and portable devices. The growing awareness of the power of the digital transformation has fostered an interest to explore how Brazil could harness its potential to provide increased environmental sustainability and advance the effort against climate change.

This SSC proposal will pursue two main objectives, both of which were part of the previous two phases of cooperation phases: i) strengthening protection of intellectual property rights and ii) advancing digital green government in Brazil.

The proposed joint efforts build on the established strong bilateral SSC partnership between Brazil and Denmark that has been in existence since 2015. The third SSC phase will adapt to the changing political priorities of Brazil and the remarkable organizational and strategic advancements made by the partnership institutions INPI and SGD during the two previous phases. It will also include activities with the "parent" ministries, the Ministry of Development, Industry, Commerce and Services (MDIC) as well as the Ministry of Management and Innovation in Public Services (MGI), as to reinforce selected strategic projects that have roots in the past two phases and will now be implemented at the highest level. The latter effort will also endeavor to establish a sustainable platform for dialogue between the two countries that can persist after the conclusion of the SSC.

The focus of the previous phase in the cooperation on intellectual property was to aid INPI's efforts to reduce the substantial backlog of

patent filings, which in 2019, when the dialogue between DKPTO and INPI was initiated, was almost 150,000 pending applications. DKPTO experts in the SSC supported INPI's strategic and steadfast efforts to reduce this burden by exchanging experiences within patent examination and quality management of workflows. At the final stage of phase II (June 2023), the backlog had been reduced to 7,800 pending filings.

The focus of phase III of the cooperation on IP will be to support INPI's stated ambitions from its 2023-2026 strategic plan, which, inter alia, aims to establish it as a regional reference office in terms of performance and reduce its median patent examination to two years, a metric on par with the best Asian and European IP offices. For this to materialize further fine tuning of the workflows and organization, steps that are meticulously described in INPI strategy and will be actively supported by DKPTO inputs. Furthermore, the successful innovation cooperation between Denmark and Brazil from phase II will be continued to the benefit of exchanges between high-tech industries and researchers in both countries.

On digital government, Brazil has made impressive headway by digitalizing more than 4,000 public services and creating many solutions that has expanded the reach of government to assist the vulnerable segments of the population, as evidenced during the COVID pandemic. The focus of phase III will be to consolidate this digital transformation by leveraging the potential of better and more integrated basic data and establish a stronger information infrastructure in Brazil. Such a development would bring even more digital services to Brazil's most remote areas, also by expanding digital government in the country's more than 5,000 municipalities.

Most of the joint activities of this proposal will be directly implemented by the DKPTO, recognized as one of Europe's best IP offices in performance. Activities on digital government will be provided by a range of Danish institutions, including the Danish Agency for Digital Government, the Danish Agency for Data Supply and Infrastructure, municipalities, and relevant consultants, when needed. Combined, they will facilitate the experience-sharing to support stated ambitions of the federal Brazilian government, as detailed below.

Sustainable Development and the Sustainable Development Goals (SDGs)2

The SSC's efforts to support the development of a Brazilian economy based on knowledge-intensive industries will contribute to economic growth (SGD8.1), achieve higher levels of productivity (SGD8.2) and contribute to better frameworks for job creation and entrepreneurship that are not based on extractive industries of environmental degradation (SGD8.4). A strong IP infrastructure will further enhance scientific research, boost the technological capabilities in Brazil (SGD9.5) and contribute to industrial diversification (SGD9.b).

The expansion of digital government in Brazil will enhance transparency and limit irregularities in the provision of public services (SGD16.5) and contribute to institutional effectiveness and accountability at all levels of government (SGD16.6). Specific ongoing projects on digital identity in Brazil (SGD16.9) will also be directly supported in phase III. Using digital government and the data produced by it to enhance environmental sustainability will also help build capacity for addressing climate action and mitigation (SGD13.3).

Project Logic (Theory of Change) ½-1 page

The objective of this cooperation is to strengthen IPR protection and to advance digital green government in Brazil. In aspiring to do so, the project intervention logic is informed by the experiences of the two preceding phases and the joint analysis developed with the two main partners, INPI and SGD.

INPI is Brazil central authority of IPR and has the government mandate to "drive industrial innovation through protection of IPR". In doing so, its institutional vision is to achieve a standard of performance comparable to that of the world's best IP offices as described with an extensive list of organizational goals and KPI's in INPI's (2023-2026) strategy.

All activities presented in this cooperation are aligned with INPI's own strategic goals and will thus contribute to enhanced performance of INPI services, thereby increasing the impact on innovation and industrial development in Brazil to the benefit of its entrepreneurs, consumers and workforce.

SGD and SEGES drive digital government and digital and green innovation of public services in Brazil. The continued expansion of

² **Sustainable development** meets the needs of the present without compromising the ability of future generations to meet their own needs. The SDGs (adopted 2015) is a plan of 17 interlinked and integrated goals to achieve sustainable development

digital and data-driven government in Brazil will enable 1) more vulnerable citizens in the country's vast geography to access government services and 2) government actors to continue ongoing innovation towards ensuring a more socially and environmentally sustainable Brazil through use of technologies and data-based solutions. All activities contained in this proposal are aligned directly with the SGD and SEGES organizational goals and priorities to ensure impact and relevance.

Exit strategy and cooperation after conclusion of phase III

Phase III will be the last phase of joint activities projected within the SSC cooperation modality. As such, outcomes and activities are designed jointly with INPI and SGD with an eye to conclusion of cooperation activities in 2026 and are meant to provide inputs for the continued sustainable organizational development of the institutions.

As indicated above INPI has gone through an impressive development in the years since this cooperation started. The office has successfully managed to significantly reduce an excessive back-log

The work conducted in the past years has now put INPI in a position where the senior management at the office can suddenly look ahead and define objectives and goals for the future.

With the launching of the national IP strategy for 2023-2026 INPI has taken the next step towards further enhancing capacity of the office.

Aligning the activities with the national IP strategy ascertains that the activities in the SSC project are relevant to INPI and guarantees sustainability.

One of the ambiguous objectives is to bring the processing time for patent applications down to two years and thereby get INPI on par with the best Asian and European IP offices.

Continuous focus on examination training and issues related to quality management will facilitate the transition from an office suffering from an accumulated case load and extensive delays when the cooperation started to a high-end office that meets international standards.

Another focus point for INPI senior management is to change the office approach from being a "traditional" government office which primarily conduct statutory tasks (issuing patents registering

| | , | | | | |
|-----------------------|--|--|--|--|--|
| | trademarks) towards a more customer centric office where focus is on facilitating the "entrance" to the IP system for the end-user. | | | | |
| | Enhanced awareness among companies (in particular SME's) of the importance of protecting the intellectual property has been a topic in phase II of the project and support has been provided to various awareness activities. DKPTO has extensive experience with such work and the related change process. Supporting INPI in changing their approach will ascertain that the knowledge obtained in phase II will be further built upon in phase III | | | | |
| | INPI and SGD are to assume a more prominent role in the cooperation in terms of project management than in previous phases of the cooperation. This will lead to increased organizational ownership of the results and impact produced. Additionally, all activities will be conducted with "phasing-over" in mind. It is anticipated that this approach will encourage independent sustained efforts in the identified activity tracks in this proposal post-phase III. | | | | |
| | During the implementation of the proposed activities, the partners will also discuss other modalities for continued institutional and commercial dialogues between the two countries. | | | | |
| | The sector counsellor has played a major role in operationalizing the Danish-Brazilian innovation network, which is facilitates exchange of best practices in areas where Denmark is strongly positioned. The innovation network is not an integral part of the SSC. The partners will look into the possibilities of the innovation network supporting the partners in future activities post-phase III. | | | | |
| Main objective of SSC | Strengthen protection of intellectual property rights in Brazil | | | | |
| project | and advance digital and green innovation in government in Brazil | | | | |
| Outcome A | Strengthen examination, registration, and protection of intellectual property rights in Brazil | | | | |
| Output A.1 | Enhance efficiency and consistent quality in examination and registration of IPR | | | | |
| Output A.2 | Strengthen internal training in technical areas and advance a conducive workplace environment at INPI | | | | |

| Output A.3 | Advance dialogue and interaction with INPI users | | |
|----------------------------------|---|--|--|
| Output A.4 | Promote awareness and observance of IP in Brazil | | |
| Output A.5 | Advance IPR-complementary marked regulation in Brazil | | |
| Outcome B | Advance innovation and IPR commercialization in Brazil and in the Latin American region | | |
| Output B.1 | Support innovation and IPR commercialization initiatives in Brazil | | |
| Output B.2 | Promote strategic use of strong IPR systems as industrial development policy in Latin America | | |
| Outcome C | Advance digital government and green innovation in public services in Brazil | | |
| Output C.1 | Further strategic use of data to improve delivery of digital public services and increase environmental sustainability | | |
| Output C.2 | Expand reach of digital services in Brazil and further the use of digital and green government in states and municipalities | | |
| Output C.3 | Enhance leadership competences in digital government amongst the Brazilian civil servants | | |
| Output C.4 | Integrate data use in centralized public procurement to measure environmental and social impacts | | |
| Output C.5 | Operationalize the use of Behavioral Insight theory (BI) to promote green innovation in government. | | |
| Assumptions and risks 1/2-1 page | The successful implementation of the present SSC will depend upon the stable political environment in both countries and mutual commitment, continued interest, and available resources of all involved actors, notably DKPTO, INPI, SGD and SEGES and relevant Brazilian third parties. To mediate this risk, the principal partners of the project (DKPTO and INPI) will continuously review the membership of the Steering Committee to ensure that it holds the | | |

| | requisite mandate and reflect the knowledge and authority to effectively facilitate the implementation of the project. | | | |
|--|---|--|--|--|
| | Any departure of key project personnel from either partner could have negative effects on activities and, ultimately, the success of the project. | | | |
| | Should any of the abovementioned risk materialize, the Steering Committee will be responsible for devising and agreeing on a risk mitigation plan. | | | |
| Management set-up | A Steering Committee will be responsible for the managerial oversight of the project throughout its duration. At the outset, this body will be composed of senior management representatives of DKPTO, INPI, SGD, and SEGES as well as relevant project support staff. | | | |
| | Should the need arise, the membership of the Steering Committee could be expanded to adequately represent other involved entities. It will convene at least twice a year and extraordinarily, if need arises. | | | |
| | The work of the Steering Committee will be based on a comprehensive Terms of Reference, to be agreed upon jointly. Thematic and specialized working groups will supplement the work of the Steering Committee, as needed. | | | |
| | Over the coming months work will be initiated to develop an overall framework. As phase III of this cooperation is to commence in advance of the overall framework document being finalized the project will run under the present modality and be operated on project level. | | | |
| | Once the framework document is approved (most probably a year from now) the partners will seek guidance in the framework document and aim at aligning with the objectives set out in the framework document the best way possible. | | | |
| Contributions from Danish Public Authority | DPKTO will provide all necessary human resources and external contract expertise to realize the fulfillment of the objectives defined in this document. The Sector Counsellor in Brasilia is a dedicated resource to the SSC and will act as the day-to-day interface for the operation of activities, throughout its cycle. The Project Leader will travel to Brazil when required for regular consultations and dialogue with partners. | | | |

| | Additional Danish public authorities connected to the digital government track will equally contribute with human resources to realize activities and secure the implementation of the agreed workplan of outcome C. |
|--------------------------------------|--|
| Contributions from partner authority | Based on agreed timetables, INPI, SGD and SEGES will avail relevant staff to participate in activities in Brazil. For activities in Denmark, the relevant authorities will commit to provide |
| Budget | DKK 10.000.000 (ten million Danish kroner) |

Results Framework and Work Plan (Annual and Final Report)

for

SSC project in Intellectual Property Rights, Innovation and Digital Government

between

Denmark and Brazil

Phase 3

١

Results Framework and Work Plan for SSC Project in Intellectual Property Rights, Innovation and Digital Government between Denmark and Brazil

Project period: July 2023 – July 2026

| OBJECTIVE of SSC project: | Status at project completion: |
|---|------------------------------------|
| Strengthen protection of intellectual property rights in Brazil | Achieved Partly achieved – explain |
| and | Not achieved – why |
| advance digital and green innovation in government in Brazil. | |

| Activities not specifically related to outcomes | | | | | | |
|---|--|---|---------|--------------|--|--|
| Activity | Purpose – content - product | Partners and resources involved | Timing | Status year: | | |
| 0.1: High-level delegation visit to Denmark for INPI (output A and B) | Purpose: introduce new INPI management to IPR registration, protection and enforcement in Denmark to inform areas of cooperation. Content: One three-day delegation visit for INPI President plus three advisers. Product: Mission report. | Travel and stay for four INPI representatives in Denmark. DKPTO: 10 working days in Denmark. | Q4 2023 | | | |

| Activity 0.2: High-level delegation visit to Denmark for digital government and green innovation partners (output C) | Purpose: introduce the Brazilian Minister for Management and Innovation in Public Services to innovation within digital and green government in Denmark to inform areas of cooperation. Content: One three-day delegation visit for the Minister as well as SGD Secretary and four advisers. Product: Mission report. | Travel and stay for six Brazilian representatives in Denmark. DKPTO: 10 working days in Denmark. | Q4 2023 | |
|--|--|---|--|--|
| Activity 0.3: Steering Committee meetings and project coordination | Purpose: Ensure continuing SSC project coordination and management. Content: adequate resource for DKPTO project management and assistant as well as planning and participation in six SSC steering committee meetings with Brazilian partner representatives. Product: Minutes of Steering Committee meetings and decisions, approved activity plans. | DKPTO: Project manager: 20 working days per quarter to ensure SSC operation, biannual project coordination visits and participation in steering group meetings in Rio. 5 extra working days extra per visiting delegation in Rio within outcome A and B. Project assistant: 5 working days per quarter to ensure compliance and accounting. One visit to Rio to facilitate coordination with SSC counterpart in INPI. | Q4 2023, Q2 2024, Q4 2024, Q2 2025, Q4 2025, Q2 2026. | |

| | Total: 335 working days | |
|--|-------------------------|--|
| | | |
| | | |

| OUTCOME A: | Status at project completion (if earlier year:): |
|--|---|
| Strengthen examination, registration, and protection of intellectual property rights in Brazil | Achieved Partly achieved – explain Not achieved – why |

| Output A.1: Enhance efficiency and consistent quality in examination and registration of IPR | Status at project completion (if earlier year:): Achieved Partly achieved – explain Not achieved - why |
|---|--|
| Output A.1 indicator: Average patent processing time in INPI is reduced from 6.9 years to 2.0 years. | Status at project completion: (if earlier year:): |

Observations:

During Phase 2 of the SSC a central focus was to support INPI in eliminating a substantial case back-log and reducing the processing time. Activity A 1.1 to A 1.5 all relates further enhance the efficiency of INPIs case handling and are as such extensions of similar interventions in the

previous phase. Reducing the processing time from 6.9 years to 2.0 years will get INPI on par with the best Asian and European IP offices, which is a central strategic ambition in the INPI Strategic Plan 2023-26.

| Activity | Purpose – content - product | Partners and resources involved | Timing | Status year: |
|--|--|--|---------|--------------|
| A.1.1: INPI delegation visit to Denmark (management of quality) | Purpose: introduce INPI specialists to DKPTO's approach to management of quality, including QMS systems in operation. Content: One week-long delegation visit in Denmark for five INPI experts. Product: TOR and mission report. | Travel and stay for five INPI representatives in Denmark. DKPTO: 15 working days in Denmark. | Q1 2024 | |
| A.1.2: Baseline study for INPI quality management and case processing | Purpose: chart INPIs quality management and measurement methodology for work processes and identify obstacles to expediting case processing. Content: One week-long DKPTO delegation visit in Brazil. Product: TOR and mission report, including baseline description. | Travel and stay for two DKPTO experts in Brazil. DKPTO: 2 x 11 working days (2.5 homebased for preparation and reporting; 3.5 for airplane travel to Brazil; and 5 to facilitate workshop in Brazil). | Q2 2024 | |
| A.1.3: Patent Flow Automation (PFA) and Patent Search Optimization (PSO) | Purpose: working from baseline study, assess INPI projects on PFA and PSO and discuss application of similar agile working methods from DKPTO context. | Travel and stay for two DKPTO experts in Brazil. DKPTO: 2 x 11 working days (2.5 homebased for | Q4 2024 | |

| | Content: One week-long DKPTO delegation visit in Brazil. Product: TOR and mission report. | preparation and reporting; 3.5 for airplane travel to Brazil; and 5 to facilitate workshop in Brazil). | | |
|--|--|--|---------|--|
| A.1.4: E-patents and Patent Database Modernization (PDM). | Purpose: Exchange DKPTO perspectives on smart e-filings, pre-validation and streamlining of patent databases, based on WIPO guidelines. Content: One week-long DKPTO delegation visit in Brazil. Product: TOR and mission report. | Travel and stay for two DKPTO experts in Brazil. DKPTO: 2 x 11 working days (2.5 homebased for preparation and reporting; 3.5 for airplane travel to Brazil; and 5 to facilitate workshop in Brazil). | Q3 2025 | |
| A.1.5: No-Search Trademarks Examinations, Trademark Opposition Filing, and possible revision of LPI. | Purpose: Exchange DKPTO perspectives on streamlined trademark examination processes, including no-search examinations and simplified opposition processes (2.0) with the intent of presenting options for revision of Brazil's IP law – LPI. Content: One week-long DKPTO delegation visit in Brazil. Product: TOR and mission report. | Travel and stay for two DKPTO experts in Brazil. DKPTO: 2 x 11 working days (2.5 homebased for preparation and reporting; 3.5 for airplane travel to Brazil; and 5 to facilitate workshop in Brazil). | Q1 2026 | |

| Output A.2: | Status at project completion (if earlier year:): |
|-------------|--|
| | |

| Strengthen internal training in technical areas and advance a conducive workplace environment at INPI. | |
|---|--|
| Output A.2 indicator: | Status at project completion (if earlier year:): |
| INPI's workplace rating (iGovPessoas) will rise from the current 42.1 percent to over 70 percent by 2026. | |

Observations:

To become a reference IP office and attract and retain qualified staff, INPI has a strategic ambition to raise the quality of its working environment and improve the job satisfaction among their employees. During the past phase of the SSC, INPI management has become accustomed with the DKPTO's HR development, workforce management, internal communication, and work climate initiatives and have an expressed interest in sharing experiences in this domain.

| Activity | Purpose – content - product | Partners and resources involved | Timing | Status (year:): |
|---|--|---|---------|-----------------|
| A.2.1: INPI delegation visit to Denmark (technical areas/working environment) | Purpose: introduce INPI specialists to DKPTO's approach to internal training, mentoring, continuing learning and workplace environment. |---|---|--|---------|--|
| A.2.3: Manager Development Program (PDG), Technical Development Program (PDTEC) and Team Development Program (PDE). | Purpose: Conduct experience-sharing workshops of DKPTO HR and internal work live programs to seek synergies with key INPI initiatives, including PDG, PDTEC and PDE. Content: One week-long DKPTO delegation visit in Brazil. Product: TOR and mission report. | Travel and stay for two DKPTO experts in Brazil. DKPTO: 2 x 11 working days (2.5 homebased for preparation and reporting; 3.5 for airplane travel to Brazil; and 5 to facilitate workshop in Brazil). | Q4 2025 | |
| A.2.4: Strategic workforce management and work climate | Purpose: Conduct experience-sharing workshops of DKPTO HR and internal work live programs to seek synergies with INPI's Gender, Diversity and Inclusion Program and ongoing efforts to restructure personnel policies, based on internal movements policy and skills mapping. Content: One week-long DKPTO delegation visit in Brazil. Product: TOR and mission report. | Travel and stay for two DKPTO experts in Brazil. DKPTO: 2 x 11 working days (2.5 homebased for preparation and reporting; 3.5 for airplane travel to Brazil; and 5 to facilitate workshop in Brazil). | Q1 2026 | |

| A.2.5: Internal communication and addressing psychosocial risk. | Purpose: Conduct experience-sharing workshops of DKPTO HR and INPI practices on internal communication practices and social activities to address staff well-being and sense of unity. Content: One week-long DKPTO delegation visit in Brazil. Product: TOR and mission report. | Travel and stay for two DKPTO experts in Brazil. DKPTO: 2 x 11 working days (2.5 homebased for preparation and reporting; 3.5 for airplane travel to Brazil; and 5 to facilitate workshop in Brazil). | Q2 2026 | |
|--|--|--|---------|--|
|--|--|--|---------|--|

| Output A.3: | Status at project completion (if earlier year:): |
|---|--|
| Advance dialogue and interaction with INPI users | |
| Output A.3 indicator: | Status at project completion (if earlier year:): |
| Guidelines for systematic interaction with stakeholders and users of INPI's services are drafted and operationalized. | |

Observations:

An important aspect of operating a modern IP office is to have a customer-centric approach. It is not sufficient that the IP offices limit themselves to conducting statutory tasks, such as granting of patents and registration of trademarks. Efforts also needs to be put into making it as easy as possible for end-users to protect their IP rights and subsequently capitalise on their innovation to the prosperity of their businesses as well as to the national economy. DKPTO has worked in this for the last 20 years internally by training technical staff in interacting with endusers and through targeted information activities aiming at making it as easy as possible for the end-users to protect their IP.

| Support innovation and IPR commercialization initiatives in Brazil. | |
| Output B.1 indicator | Status at project completion (if earlier year:): |
| National Brazilian action on innovation and IPR is promoted and implemented. | |

Observations:

DKPTO engages in partnerships in order reach out to stakeholders for whom IP is not an obvious priority. Partnerships with business centres, universities, industry clusters ensure that users can still obtain information about IPR and that they are directed towards the DKPTO to aide commercialization of innovation.

| Promote strategic use of strong IPR systems as industrial development policy in Latin America. | |
| Output B.2 indicator: | Status |
| Establishment of a regular dialogue mechanism between selected Latin American countries about IPR and industrial development. | |

Observations:

The European Patent Office (EPO) and the European Union Intellectual Patent Office (EUIPO) uphold regular dialogues between the member states and launches capacity-developing initiatives. In Latin America, a EU-funded regional IP Key project has been initiated in this spirit to stimulate EU-LATAM exchanges. To address INPI's stated ambitions to become a regional reference IP Office, this output will complement EU initiatives to promote regional integration of IP protection initiatives by working in par with IP Key, focusing on IP as an industrial development tool. Activities will be held at senior level.

Background Study

The proposed SSC builds on two preliminary phases: the first phase (2015-18) was implemented by the Danish Business Authority (ERST) and focused on experience-sharing of how to stimulate innovation in government. Brazilian partners were the Ministry of Planning through Brazil's National School of Public Administration (ENAP). The second phase (2019-23) was a reformulation as ERST withdrew from the cooperation, which instead was implemented by the Danish Patent and Trademark Office (DKPTO). This change introduced a new objective: strengthening the registration, administration and protection of intellectual property rights (IPR) in Brazil and Argentine. Meanwhile, the cooperation continued its focus on innovation in government, which was more narrowly defined as improving digital government to match the new ambitions of modernization of the Brazilian government under Jair Bolsonaro. Brazilian partners were the Institute of Industrial Property of Brazil (INPI) and the Ministry of Economy.

Having been formulated in the wake of the presidential elections that brought back President Luiz Inácio Lula da Silva and prompted a massive reshuffle of political priorities and reorganization of ministries, the third and final phase of the cooperation will synthetize the partner selection from the past two phases to support new government priorities while retaining the established focus of the SSC. As an example, many partners from ENAP who benefited from capacity-developing activities in the first phase are now in central positions in the new Ministry of Management and Innovation in Public Services (MGI) where they lead reform initiatives that are inspired by elements from the Danish experience-sharing. These include the use of Behavioural Insights to promote green innovation in government and how to integrate data use in centralized public procurement to measure environmental and social impacts. Simultaneously, established activity tracks on strengthening IPR and furthering Brazil's plan for digital government will be maintained. Past pilot activities in Argentina have been discontinued after the closure of the Embassy of Denmark in Buenos Aires.

Through the short lifespan of the SSC, the societal context in Brazil has undergone dramatic changes. In 2015 and 2016, it underwent a historically deep recession during which its economy contracted by more than 7 percent. After a dramatic and politically divisive election in 2018, the economic recovery slowly progressed until Brazil was battered by the COVID-19 pandemic which claimed the lives of more than 700,000 inhabitants and shrank the economy with five percent.

The central priorities of the new Lula government will be to grow the economy and to institute reforms to continue modernization of the public sector to better deliver social assistance programs to the population. In his campaign proposal Reconstruction and Transformation of Brazil, Lula describes his ambition to change the country into a digital and green regional economic leader by investing heavily in digital and green technologies while expanding social protection for vulnerable populations. To attract foreign investments in knowledge-intensive sectors, his administration has highlighted the necessity of continuing the improvement of its IPR protection. Vice-president Geraldo Alckmin, who has assumed the leadership of industrial development policies, has pledged that Brazil will bring down its average patent examination time to two years, an international benchmark of the most advanced economies. Currently standing at 6.9 years, INPI has devised a comprehensive strategy of initiatives that will contribute to transforming the institution into a regional reference. Activity proposals in the third phase of the are designed to support these ambitions, based on exchange of Danish practises.

Baseline 1: Brazil has eliminated its past patent backlog and aspire to become an international class IP-office, based on performance, and a regional reference in Latin America.

At the start of the IPR cooperation in 2019, Brazil had accumulated more than 150,000 patent application and average examination took more than 10 years. As of mid-2023, the backlog has been reduced to under 7,000 and the average examination was 6.9 years. The SSC will support INPI's fulfilment of its ambition of an average patent examination of two years by introducing a number of DKPTO practices including quality management tools, optimized workflows and streamlined IPR legislation that facilitate quicker processing. Further, the SSC will continue cooperation on outreach and cooperation, user dialogue and initiatives from DKPTO to improve work environment to make INPI a more competitive and attractive IPR institution in Brazil.

Based on a joint analysis, DKPTO and INPI management have identified seven objectives on IPR that will act as the framework for joint activities:

- 1. Enhance efficiency and consistent quality in examination and registration of IPR
- 2. Strengthen internal training in technical areas and advance a conducive workplace environment at INPI
- 3. Advance dialogue and interaction with INPI users
- 4. Promote awareness and observance of IP in Brazil
- 5. Advance IPR-complementary marked regulation in Brazil
- 6. Support innovation and IPR commercialization initiatives in Brazil
- 7. Promote strategic use of strong IPR systems as industrial development policy in Latin America

Baseline 2: Brazil has advanced innovation in public services, especially digital government, and currently has more than 140 million users on its main citizen portal, gov.br.

Brazil has made impressive strides to promote and expand its infrastructure for digital government in its more than 236 federal ministries and executive agencies. The Lula government will prioritize to expand digital government infrastructure beyond the federal level to states and municipalities in order to strengthen the foundations for integrated digital service delivery in Brazil. With more than 20 years of experience, Denmark has many perspectives on this matter, especially how to ensure cross-institutional coordination and governance framework for joint state-municipal strategies.

As the Brazilian system for digital government becomes increasingly populated, it raises a challenge about data. How to govern and use collected and produced data for policy purposes. The SSC will abridge this theme by introducing Danish best practices in data use for policy development, especially to improve environmental and social sustainability, including how to apply Behavioral Insights theory and how to use data to enhance sustainability aspects of public procurement.

Based on a joint analysis, DKPTO and MGI management have identified five objectives on innovation in government that will act as the framework for joint activities:

- 1. Further strategic use of data to improve delivery of digital public services and increase environmental sustainability.
- 2. Expand reach of digital services in Brazil and further the use of digital and green government in states and municipalities.

ANNEX 6: Background Study: SSC on Intellectual Property Rights, Innovation and Digital Government in Brazil

- 3. Enhance leadership competences in digital government amongst the Brazilian civil servants.
- 4. Integrate data use in centralized public procurement to measure environmental and social impacts.
- 5. Operationalize the use of Behavioural Insights to promote green innovation in government.

SUPPLERENDE KOMMENTARER TIL BUDGETTET

Af budgettet (ark 5 C) fremgår det hvor mange rejser der forventes afviklet i hele projektets levetid. Nedenfor et overblik over hvilke specifikke aktiviteter

I ark 5 C differentieres der mellem tre typer substanseksperter:

DKPTO - PVS in house eksperter,

Innovationseksperter – eksperter fra ØES og erhvervscentre, universiteter, søsterstyrelser i EM mm.

Digital Government - implementeres af Styrelsen for Dataforsyning og Infrastruktur (SDFI) samt af Gladsaxe Kommune.

Annex 9 - Quality Assurance checklist for appraisal of programmes and projects¹

File number/F2 reference:

2023-28085

Programme/Project name:

Strengthening Intellectual Property Rights and

Protection and Advancing Digital Green

Government in Brazil. (phase III)

Programme/Project period:

1 September 2023 - 31th of August 2026

Budget:

10,000,00 DKK

Presentation of quality assurance process:

The preparation of Phase III projects under the Strategic Sector Cooperation Facility follow the SSC guidelines. The preparation and decision making process consist of three steps: 1) A updated concept note, which entails an assessment of lessons learned during phase I+II and strategic choices for phase III – followed by dialogue between the Secretariat for Strategic Sector Cooperation, the concerned embassy and the Danish authority; 2) Preparation of the required project document, annual work plans, budget and an updated background study, which includes a context analysis and a basic base line assessment. Prior to the official submission of the signed project document a quality assessment dialogue takes place between the Secretariat for Strategic Sector Cooperation and the Danish authority, 3) Approval of the project document, which is signed by the local and Danish partner. The Secretariat for Strategic Sector Cooperation validates that the required information and analysis is included as per the SSC guidelines. Projects with a total value of 10 million DKK or above are approved by the Minister for Development Cooperation.

□ The design of the programme/project has been appraised by someone independent who has not been involved in the development of the programme/project.

The SSC guidelines don't include an independent appraisal. However, reviews of the overall Strategic Sector Cooperation Facility are made.

Two persons in the Secretariat assess the concept note and the project document using the OECD/DAC quality criteria and the guide for external appraisal of Projects and

¹ This Quality Assurance Checklist should be used by the responsible MFA unit to document the quality assurance process of appropriations where TQS is not involved. The checklist does not replace an appraisal, but aims to help the responsible MFA unit ensure that key questions regarding the quality of the programme/project are asked and that the answers to these questions are properly documented and communicated to the approving authority.

Programmes up to 43 mill. DKK as a point of departure. Subsequently, the project leader in the Danish authority makes the necessary adjustments.

☐ The recommendations of the appraisal has been reflected upon in the final design of the programme/project.

N (see above).

The programme/project complies with Danida policies and Aid Management Guidelines.

The SSC project complies with the SSC guidelines. Which draw on the overall principles and concepts of the Aid Management Guidelines.

☐ The programme/project addresses relevant challenges and provides adequate responses.

Yes.

a Issues related to HRBA/Gender, Green Growth and Environment have been addressed sufficiently.

The project proposal is not formulated based on a HRBA approach and does not give specific attention to poverty and gender equality. Green Growth is partly covered by the SSC project.

Comments from the Danida Programme Committee have been addressed (if applicable).

N/a.

The programme/project outcome(s) are found to be sustainable and is in line with the partner's development policies and strategies. Implementation modalities are well described and justified.

The focus areas are defined and the project document is elaborated in collaboration between the Danish authority and its key partner, and finally agreed at management level before submitting to the SSC Secretariat. Basic project outcomes are described in the project document.

The results framework, indicators and monitoring framework of the programme/project provide an adequate basis for monitoring results and

Considering the nature of the partnership between Danish and local authorities the results framework in the project document is considered adequate.

□ The programme/project is found sound budget-wise.

Yes. The SSC project budget follows the SSC guidelines and budget templates complying with the budget guidelines issued by the Ministry of Finance (budgetveiledningen) and the principles for the calculation of overhead for state agencies (veiledning om prisfastsættelse) from the Agency for Modernisation.

□ The programme/project is found realistic in its time-schedule.

Flexibility in the design and implementation modalities are important features of the SSC projects, and is one of the prerequisites of the SSC approach for relevance and results. Hence, changes in the actual implementation can happen.

 Other donors involved in the same programme/project have been consulted, and possible harmonised common procedures for funding and monitoring have been explored.

The project proposal does not refer to consultations with other donors. However, as this project proposal is the third phase it's anticipated that donor consultations have been undertaken in preparation of the previous phases.

□ Key programme/project stakeholders have been identified, the choice of partner has been justified and criteria for selection have been documented.

The background study includes a stakeholder analysis. On this basis the local partner is identified and is a continuation from the previous phase.

□ The executing partner(s) is/are found to have the capacity to properly manage, implement and report on the funds for the programme/project and lines of management responsibility are clear.

The Danish Patent and Trademark Office will be the main executing partner but technical input will be given from other Danish public Authorities.

 Risks involved have been considered and risk management integrated in the programme/project document.

The project document contains a basic risk assessment.

In conclusion, the programme/project can be recommended for approval: yes / Date and signature of desk officer: 28 August 2023 Charlotte Laursen

Date and signature of management: 4 September 2023 Karin Poulsen
